                                                                                                                                                                                                                                                                                                                                                                                                                      Genes with similarity to proteins in the databases are described as 'putative', '-like' or 'similar to'. Genes that have EST similarity but no significant protein similarity are described as 'unknown proteins'. Genes that are annotated based only on gene prediction software are described as 'hypothetical proteins'. The software programs used to predict genes include: Grail (Informatice Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge, http://gnomic.stanford.edu/~chris/GENSCANW.html), Fexa (V.Solovyev & A.Salamov, Sanger Centre, http://genmic.sanger.c.uk/), and NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.bbs.dtu.dk/NetPlantGene.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Federspiel, N.A., Palm, C.J., Conway, A.B., Conn, L., Hansen, N.F., Altafi, H., Araujo, R., Huizar, L., RowLey, D., Buehler, E., Dunn, P., Gonzalez, A., Kremenetskafa, I., Kim, C., Lenz, C., Li, J., Liu, S., Luros, S., Schwartz, J., Shinn, P., Toriumi, M., Vyotskafa, V., Walker, M., Yu, G., Ecker, J., Theologis, A. and Davis, R.W.

On Jun 1, 2004 this sequence version replaced gi:34740243.
Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH (http://www.softberry.com/), GeneMark.hmm (http://www.biology.gatech.edu/GeneMark/), GlimmerM (http://www.tigr.org/tdb/glimmerm/glmr_form.html), RiceHMM (http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor (http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor (http://splobin.cse.psu.edu/html/docs/siin4.html), gap2 (http://www.tigr.org/software/glimmerm/), BLASTN and BLASTN. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene withou significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRCSP standard. A gene predicted by a single gene prediction program is also classified a probable 'hypothetical' protein and is included as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 miscellaneous feature of the sequence.

miscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OJ1293_E04 clone has an overlap with OSJNBa0053111 (DDBJ: AP005691) clone at 5' end and with P0643F09 (DDBJ: AP005111) at 3' end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (http://globin.cse.psu.edu/html/docs/sim4.html), gap2
(http://www.tigr.org/software/glimmerm/), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DBBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DBBJ accession no. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene without sequence) is classified as an 'unknown' protein. A gene predicted by a single gene prediction programs is classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

NOTE: It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

CC (AASO01081-AASO1104, AASO1311) and ACAT (acyl Coa:cholesterol
CC acyltransferase-like; AASO1311-AASO1319) are described. A yeast LCAT
CC related open reading frame, LRO1 gene sequence (AASO1342), and a rat ACAT
CC (AASO1105) cDNA sequence are also described. The polynucleotides encoding
CC LCAT or ACAT are used to produce LCAT or ACAT polypeptides. They can also
be used in a recombinant construct to transform a host cell (preferably
CC of a plant) or a plant. The recombinant construct is used to increase or
CC decrease the sterol content of the host cell or plant. It can be used to
CC alter oil production of the cell or plant preferably by increasing it.
CC The oil of the plant or the plant itself is used as a food product, or as
CC nutritional or dietary supplements, or in pharmaceutical compositions for
CC outering cholesterol. The oil can be used in foods e.g. margarine,
CC butter, cooking oil, and dressings e.g. salad dressings, mayonnaise,
CC cheese, processed meat, pasta, sauces, cereals, desserte, dips, chips,
CC baked goods, pastries, cookies, snack bars, confections, chocolates, and
CC provide a plant with tolerance to stress and insect damage

The present invention describes a nucleotide sequence (I) derived from a CC nucleotide sequence encoding an acyltransferase polypeptide comprising at CE least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one CC amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase CC polypeptide, where the encoded active membrane independent CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (I) a CC acylated carbohydrates and acylated amino acids. Also described: (I) a CC acylated carbohydrates and acylated amino acids. Also described: (I) a CC acylated carbohydrates and acylated amino acids also operably linked to at least one promoter region CC translated region which is operably linked to at least one promoter contributed in a host; (2) a vector comprising (II) (3) a host cell comprising (II) or the vector; (4) producing an cimproved active membrane independent acyltransferase polypeptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-MAY-2002; 2002SE-00001581.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and recovering the host cell culture and recovering the story control of the method in acyltransferase polypeptide; (5) a polypeptide obtained by the method in (4), where the polypeptide at least is an improved active membrane independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridising to (1) under stringent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid molecule (1) and the polypeptide are useful in producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids present in animal and plant raw material. The present sequence is used in the exemplification of the present invention.

Phospholipid:diacylglycerol acyltransferase enzymes in the pathway for triacylglycerol production and DNAs encoding the producing triacylglycerol, or for transforming any cell or increase oil content. the biosynthetic ng them, useful for organism

2000-665012/64.

Claim 6; Page 60-61; 97pp; English

The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis thaliana PDAT genomic DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ર્
                                                                     The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                         Phospholipid:diacylglycerol acyltransferase enzymes in the bio pathway for triacylglycerol production and DNAs encoding them, producing triacylglycerol, or for transforming any cell or org

Several novel polynucleotides encoding the plant sterol CC acyltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC coA:cholesterol acyltransferase-like, AASO1101-AASO1319) are described. A CC yeast LCAT related open reading frame, LRO1 gene sequence (AASO1042), and CC a rat ACAT (AASO1105) cDNA sequence are also described. The CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT CC polynucleotides. They can also be used in a recombinant construct to polypeptides. They can also be used in a recombinant construct to construct is used to increase or decrease the sterol content of the host cell or plant. It can be used to alter oil production of the cell or CC cell or plant. It can be used to alter oil production of the plant construct is used as a food product, or as nutritional or dietary the supplements, or in pharmaceutical compositions for lowering cholesterol. The oil can be used in foods e.g. margarine, butter, cooking oil, and CC dressings e.g. salad dressings, margarine, butter, cooking oil, and cookies, snack bars, confections, chocolates, and beverages. The CC cookies, snack bars, confections, chocolates, and beverages. The CC alteration in sterol content and/or composition can also provide a plant of the plant of the plant of cookies, snack bars, confections, chocolates, and beverages. The cookies, snack bars, content and/or composition can also provide a plant of the plant of the plant of cookies, snack bars, confections, chocolates, and beverages. The cookies, snack bars, confections, chocolates, and beverages. The cookies cookies, snack bars, confections, chocolates, and cookies and cookies and cookies and insect damage

```
CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) CC; (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and harvesting the cC host cell culture and recovering the improved active membrane independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in CC independent acyltransferase polypeptide; (6) an improved active membrane independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridiaing to (I) under stringent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid completed or fat-soluble molecules, in removing undesirable fat or in CC modifying lipids present in animal and plant raw material. The present xx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-MAY-2002; 2002SE-00001581
